How does Beautiful Homes Painting Services evaluate a Site?

#01 Initial Contact

The evaluation process often begins with the customer reaching out to Asian Paints for painting services.

#02 Appointment Scheduling

An appointment is scheduled with the Safe Painting Service Associate to visit the site in question.

#03 Site Visit

The Associate visits the site at the scheduled time to assess the scope of work and specific requirements.

#04 Inspection and Measurement

During the site visit, the Associate inspects surfaces using Asian Paints TruCare Moisture Meter and measures areas with the TruCare Laser Distance Meter.

#05 Surface Analysis

The Associate evaluates surfaces for defects such as cracks or dampness before addressing them. Waterproofing problems, if found, are tackled at the source to prevent recurrence.

#06 Customer Discussion

The Associate discusses the customer's preferences, color choices, and any specific design or finish requirements.

#07 Estimation

The Associate offers a cost and time estimate for the painting project based on the site assessment and customer input. A digital quote, detailing the cost from the site inspection, is then provided to the customer.

#08 Material Selection

The Associate helps the customer choose suitable colour shades and finishes based on their preferences and the site's conditions.

#09 Proposal

A detailed proposal is provided to the customer, outlining the scope of work, cost breakdown, and timelines.

#10 Finalization

Once the customer approves the proposal, the project is finalized, and a contract is signed.

What are the factors of site evaluation?

When assessing a wall for painting or other purposes, the Beautiful Homes Painting Service considers specific factors for evaluating its condition and suitability.

01

Surface Condition

Check for cracks, dents, or other visible damage on the wall's surface.

02

Smoothness

Assess how smooth or uneven the wall surface is, as this can affect the quality of the finish.

03

Cleanliness

Examine the wall for dirt, dust, grease, or other contaminants that may need cleaning before painting.

04

Moisture and Dampness

Look for signs of moisture or dampness, as this can indicate water damage and may require special treatment.

05

Previous Paint

Determine if the wall has existing paint and assess its condition. This helps decide if paint removal or additional preparation is needed.

06

Adhesion

Check how well the existing paint adheres to the wall to ensure proper bonding of the new paint.

07

Texture

Note the texture of the wall, such as smooth, textured, or rough, as this can impact paint application and appearance.

08

Structural Integrity

Inspect the wall for any structural issues or weaknesses that may need repairs before painting.

09

Lighting Conditions

Evaluate the lighting in the room or area where the wall is located, as it can affect how paint colors appear.

10

Environmental Factors

Environmental factors like humidity, temperature, & exposure to sunlight, as they can influence paint choice & durability.

How to book Beautiful Homes Painting Service?

You can book Beautiful Homes Painting Service by filling up a form here- <https://www.asianpaints.com/services/asian-paints-safe-painting-service.html>

Post the form fill, we will follow the below steps to paint your home:

1. Our Helpline Agent will call you to obtain some more details and book an appointment for you.
2. The Asian Paints Associate will then reach out to you to finalise a date and time for your home visit.
3. The Associate will visit your home and undertake a technical site evaluation.

Post the Evaluation, the Associate will provide you a Digital Quotation. On approving the Quotation, we will start the work on your Site
